INTRODUCTION

Review article is the process of systematically search the information or evidence which is already published on a particular topic. In the systematical review researcher use already published data which use in the past study. In the systematic review various study uses on the same topic. In the new era of medical sciences systematic review article is the best way to

develop an evidence and collection of information from the study.¹

In the scientific area systematic review article is having more requirements. It is useful to compare the older studies in the similar topic and find out the conclusion. It is mention in few papers that it is not possible to examine all paper by our scientist about every paper so it is advantage to summarized the new review article.²

Importance of Research Reviews

Research review of literature continuously search and provide various information. In the part of research review is very important as getting the all data from all discipline.³

The importance includes

- It is benefitted to new researcher in career development
- It provides a theoretical knowledge or information for particular research
- It is important to find practical question
- To know about current research
- It provides the interpretation of existing literature
- It is benefit to avoid duplication of research

BASIC RULES TO BE FOLLOWED WHILE WRITING A REVIEW ARTICLE

- **Purpose of the literature review:** In the review article primary step is the well-defined clear objective and goal. Make simple form of literature so reader or researcher can use your material.⁴
- **Audience of review articles:** Audience are experts in specific research areas, students or novice researcher's and those who have

decision making ability. In review article topic must be clearly understandable by audience for examples Depression and behaviour therapy topic for the psychiatrist and mental health nurse as the target audience but this topic is useful or interested to all doctors and nurses who directly involved in take care of patient.⁴

- **Search and re-search:** Searching a new topic of paper or topic search keyword as according to your topic and data base sources. Search the paper in Google scholar, Academia, Research gate, SSRN, Index Copernicus, Scopus, web of science.⁴
- **Take notes while reading:** At the time of reading good researcher take notes also at same time. Notes provide deep processing of the material which develops the memory of researcher. Not taking is natural and easy way.⁴
- **Be Critical and Consistent:** Good review not just like a summarize data. Good review always discusses in critical way, find out a solution of a problem. After getting information or review the researcher able to know new thing or ideas about topics.⁵
- **Writing the review:** Good review of article

follow the standard principles. Writing a review article needed systematic literature and requires detail information so that researcher can get an idea or thought.

- **Feedback:** it is important to build a final blue print or draft. It is important to writing a review article.⁵

STEP TO WRITING REVIEW ARTICLE

Under following heading review article can be prepared

- 01. Title:** in review paper abstract should be in minimum ideas or in fewer paragraphs. Abstract include only the main idea which is covered by the researcher in the topic.
- 02. Abstract of the topic:** As for a research paper, this should be short and inform your reader of the major ideas that will be discussed.
- 03. Introduction:** It required maximum one page. The main purpose is introducing the reader that the topic idea addressing and focus in the body of the review paper. Researcher main focus is explained to reader about the article.
- 04. Main Content:** It covers the all-specific

heading included in the article. After developing the heading researcher should include all the contents related to the topic as per place given into paragraph. Researcher should add necessary information to complete the paragraph as per the heading given.

Content included limitation as per the research problem, sample size and setting of the study. Researcher should include all relevant study in the topic.

- 05. Conclusion:** It should be in long Paragraph and it is not separated from the main content of body of article. Major finding written in this section and it also provide information for an application of future research finding.
- 06. References:** Check the format of journal in which you will publish your article. Mostly Vancouver style use to write the references. Use the author's name, title of the study; journal name: volume, issue, year and page number with endnote, retrieving and sorting references.

HOW AND WHERE TO PUBLISH THE ARTICLE?

Various peer reviewed journal you can search in Google where you will publish

your article. Editorial board suggest for changes in your article if needed or give the confirmation that your article will be publish or not. Various index journal like PubMed, index Copernicus etc available online. for example: SDIS-International Journal of interdisciplinary research available on <https://shreedadueducational.com/journal/>, GFNPSS Global Nursing Journal of India available on <https://gfnps.org/journal/> or GFNPSS International Journal of Multidisciplinary research available on <https://gfnpsijmr.com/> etc available on Google search or directly on their website.
